

Capturing traffic over Wi-Fi

Auto import media

Privacy Analysis of Augmented Reality Glasses

1 Introduction

This experiment captures network traffic over Wi-Fi during the interaction between an Android phone and the Ray Ban Meta glasses, more specifically looking into the auto import of media. There was an unexpected issue during capture where the phone was not able to import the photo/videos taken from the glasses and was therefore deemed unsuccessful. However, I continued capturing network traffic whilst troubleshooting to determine if any relevant data could be observed during the failure. The 3 captures were successfully imported at different times with the last one after interrupting import by taking another photo. The hope (goal) for keeping this data collection is to have a view of the glasses's behavior under error conditions in regards to connectivity, which providing insights into how the device handles these issues.

2 Metadata

Time of experiment: Oct 16th 01:10

Duration of experiment: Roughly 8 minutes

IP addresses:

- Laptop - 192.168.0.215
- Redmi phone - 192.168.1.141
- Wi-Fi Network - 192.168.0.1
- ALFA Hotspot - 192.168.1.100/24
- Meta CDN (content delivery network) - 157.240.17.17

3 Touch Commands used

- Keep idle for 1 minute (glasses off)
- Open Meta View
- Power On
- Pairing device
- Short click capture button to take a photo
- Long click capture button to take a video recording
- Short click capture button to stop video recording
- Auto-import photo/video
- Keep idle for 5 minutes (glasses on)
