
Privacy Analysis of Augmented Reality Glasses

09.23.2024 ~ 09.28.2025

Weekly Report 1

Michelle Jessica Bösigler
michellej.boesiger@unibas.ch

Department of Mathematics and Computer Science
University of Basel

28 September 2024

What has been done (Previous Week)

- Received 3 devices including the Ray-Ban Meta glasses, a Redmi phone, and a USB WiFi adapter, which are necessary for the project at this stage.
- Had a brief introduction by Nima to Wireshark and how to use the adapter given to me.
- Successfully joined Matrix and the git repositories created by Isabel.
- Started with the literature provided in the description for the bachelor thesis.
- Had a basic overview of the information on Ray-Ban Meta glasses (the hardware components, networking capabilities, operating system)

Short term Goals (Next Week)

- Most information gathered in the previous week is from searching online, therefore will use the glasses to verify as well as develop a better understanding of the glasses and its software and usage.
- Upload the information collected, including pictures, onto git.
- Start considering on the data collection and initial experiment design for the smart glasses.
- Continue reading the literature provided in the description for the bachelor thesis.

Long term Goals (Up till the end)

- Collect traffic from the Ray-Ban Meta glasses and companion app.
- Evaluate the privacy implications of using the Ray-Ban Meta smart glasses.
- Write an analysis from the traffic generated by the Ray-Ban Meta glasses and its companion app and try to identify detect potential vulnerabilities and privacy risks.

Meeting

Had the first meeting with Nima on the 27th, where:

- I received the phone, network adapter, and glasses.
- Had a brief overview on how to use them.
