
Privacy Analysis of Augmented Reality Glasses

09.28.2024 ~ 10.05.2025

Weekly Report 2

Michelle Jessica Bösigler
michellej.boesiger@unibas.ch

Department of Mathematics and Computer Science
University of Basel

05 October 2024

What has been done (Previous Week)

- Written down (on the iPad) and took pictures of the features and description of the glasses
- Successfully paired and connected the devices
- Finished reading through one of the four literature

What will be done next week

- Need to put the description into a more formal document. Will probably choose latex since I'm more used to that.
- Already know some voice commands but need to look up more for data collection
- Will start collecting encrypted traffic using Wireshark:
 - Over the internet
 - * Mainly using roughly 20 voice commands (the temperature/weather, etc.) and record the traffic
 - * Use the touchpad or buttons and record the traffic
 - Over Bluetooth
 - * Mainly using the touchpad or buttons and record traffic
 - * Include only some simple voice commands that does not require the internet (the battery percentage, etc.) and record the traffic

Meeting

Had a meeting with Nima on the 4th, where:

- We had a discussion about the companion app and the features of the glasses.
- Came to an basic setup for the experimentation design
