Department of Mathematics and Computer Science
University of Basel

12 October 2024

What has been done (Previous Week)

- Tried setting up the experiment for both over the Wifi and Bluetooth
- Had some issues regarding the configuration for the Wifi, but still tried to do the experiments (5 times each)
- Tried to capture traffic over bluetooth but was unsuccessful (as the laptop required a bluetooth sniffer and the phone's own log didn't work)
- Uploaded one of the experiments onto Gitlab (that I now know is useless and is deleted)
- Solved the issue regarding capturing traffic for the Wifi on the Friday meeting with Nima. Also have a better idea what I am supposed to put onto
- Received a micro:bit and sim card from Nima on Friday
- Created accounts for WhatsApp, Instagram, Spotify for the interactions with the glasses
- Found some issues regarding the pairing of the glasses
 - When glasses and/case are low on battery (Can go more into whether its either-or or both)
 - When glasses were not in case for some time Also realized some areas where there is some potential privacy breaches
 - One can ask Meta whether one has received new messages or not
 - Although there is a light to indicate to others when one is taking photos/videos, however, if one starts the video then covers the light, it does not trigger the security check
 - Meta processes all the pictures and videos you take to train their AI models, and you can only say no to this in the ToS the first time you set up the app

What will be done next week

- Mainly - Will try to redo the experiments and include the metadata this time. The list of interactions is already fine from last week, but now I can incorporate the things I did write but couldn't do
- Need to look into live streaming since I have an account I feel better streaming with (though I know it works with the glasses)
- Also need to send the account information
- Write documentation regarding the experiments

- Write documentation regarding the glasses (about the security breaches and the instructions on factory reset as the website was not fully clear when I had to do that)
- Need to discuss about facial recognition and how we want to move forward with that

Meeting

Had a meeting with Nima on the 11th, where:

- Discussed the problems I had in regards to network traffic capture where the phone had no internet connection whilst connected to the hotspot.
- Reviewed the accounts used for the companion app
- Discussed about the unstable connections with the pairing of the devices
- Discussed the experiment design for network capture.
- Discussed about the problems encountered with the Micro:bit where it only displayed error messages.
