
Privacy Analysis of Augmented Reality Glasses

10.12.2024 ~ 10.19.2025

Weekly Report 4

Michelle Jessica Bösig
michellej.boesiger@unibas.ch

Department of Mathematics and Computer Science
University of Basel

26 October 2024

What has been done (Previous Week)

- Redid the experiments (3 times each) and was able to include the things I was not able to the first time round (the voice commands that would require internet connections).
- Uploaded one of each situation onto GitLab so that more can be looked into for each scenario though I did not include the screen recordings.
- Wrote some basic documentation regarding the experiments (and if there were problems, what were the problems and what I tried afterwards as well as some timestamps) though I will need to improve those throughout the weeks.
- Wrote some documentation regarding the privacy breaches of the glasses as well as improved upon the original documentations of the glasses
- Sent the account information
- Received the micro:bit and was able to flash the micro:bit, albeit with some issues, with btlejack but the sniffer was not able to sniff any 'existing connections'.
- Wrote some documentation on the set-up for the micro-bit

What will be done next week

- Continue with the Bluetooth captures
- Will still try to see if there are anymore online resources that may help with my situation
- Extend the documentations mainly regarding the Bluetooth sniffers but also of previous progress (the experiments).

Meeting

Delayed the meeting with Nima to the 21st, where:

- Tried to use the micro:bit together, but it didn't show much difference
- Discussed both sniffers and about the documentation regards to their errors
