Department of Mathematics and Computer Science
University of Basel

01 January 2024

What has been done (Previous Week)

- Finished redoing every single experiment needed with the new phone:
 - Network capture - Initial Pairing
 - * Plus the previous Touch commands, Voice commands and 8h Idle Capture
 - BLE capture - Touch commands, Voice commands, Initial Pairing
 - Classic Bluetooth capture - Touch commands, Voice commands, Initial Pairing
- Updated the visualization code and generated images relevant to the analysis for the network traffic. Some of them are uploaded whilst some not yet, depends on their use case in the final analysis of the thesis
- Updated the Experimental Procedure inside the Methodology and Experiments chapter.
- Started and is nearly finished with the Network Analysis.
 - There is a general analysis and then specific analysis for each experiment
 - So far it covers all the necessary questions 1, 2, 3, and 4
 - Question 8 (and 9) I have decided should be in other chapters as it is not suitable in here

What will be done next week

- Finish the Network analysis chapter.
 - Although it covers all questions, there is more I would like to go in depth to and make some additions.
- Write the Bluetooth analysis chapter
 - This chapter will not be as long due to the limitations during capture
- Finish the Methodology and Experiments chapter
 - After finishing writing the analysis, need to include the analysis methods
 - Add more to the limitations, more specifically for decryption and the location
 - Go through and check for accuracy due to the new experiments done
- Add Question 8 to Device Overview:
 - Due to the limitations of decryption, I believe it is more appropriate to include it here
- Then the rest left over, which I believe some will spill over into the week after, includes:

- Touch up of the introduction
- The final conclusion
- Background
- Related work

Meeting

Meeting canceled.
